## Color Rationale

The goal of this design is to integrate universal design with healthy building systems to create a perfect oasis for the older generation.

- Resort style living
- Mix of warm and cool colors
- Natural elements
- Use of lines to emphasize nature and its elements
- Spaces that create the feeling of being on vacation
- Promote healthy living, wellness, and relaxation

The color rationale includes tones of orange, green, gray, white, and cream based colors.

The bright orange and green tones incorporate Bauhaus design along with pieces of art and geometric shapes/patterns seen throughout the space

The green tones and white/cream colors also play into the idea of bringing the outside in
